This sustainable property is located in a residential complex of sustainable homes in the beautiful Vall de Pop valley. The architecture of the villas is based on the colours of the earth, on the dry stone walls, on the indigenous vegetation of the area, blending the homes into the landscape of the Vall del Pop. Their design and equipment promotes low energy consumption. The houses have an aerothermal system for heating and producing domestic hot water, underfloor heating and a heating system for the bathrooms. , installation of photovoltaic panels, motorised ventilation system, electric car charging point, domótica, terrace gardens with traditional stone walls and indigenous plants, among other elements (Ask for More Details!)
